How To Transfer Using The Roturner

No slings, no electronics, no lifting involved

1

ASSESS PATIENT CAN WEIGHT BEAR

Before moving the Roturner be sure it is in the locked position. The caregiver then wheels the Roturner into position in front of the seated user.

Press the foot bar down and gently glide the Roturner closer to the user and under their feet.

The user places their feet on the turntable and hands on the handle grip area. They are then assisted from the seated position to a standing position.

Lifting the brake handle the caregiver then unlocks and rotates the turntable left or right.

The caregiver then releases the brake into one of 5 red locking positions.

The caregiver may now assist the user to be seated on the previously placed wheelchair or other seat, then remove the Roturner.
